

STAT 215A Fall 2020

Week 13

James Duncan, OH: M, Th 2-4pm

Lab 4: Cloud Data

How did it go?

Multi-angle Imaging SpectroRadiometer

Jet Propulsion Laboratory
California Institute of Technology

Final lab: California COVID-19 forecasting

Your Goal: Forecast case and death counts in diverse counties in both north and south of California to help inform the distribution of PPE.

Final lab: California COVID-19 forecasting

Your Goal: Forecast case and death counts in diverse counties in both north and south of California to help inform the distribution of PPE.

Two sets of counties to forecast:

- The Bay Area (9 counties)
- Choose one of:
 - Exurban counties around LA
 - Rural southern Central Valley counties

Final lab: California COVID-19 forecasting

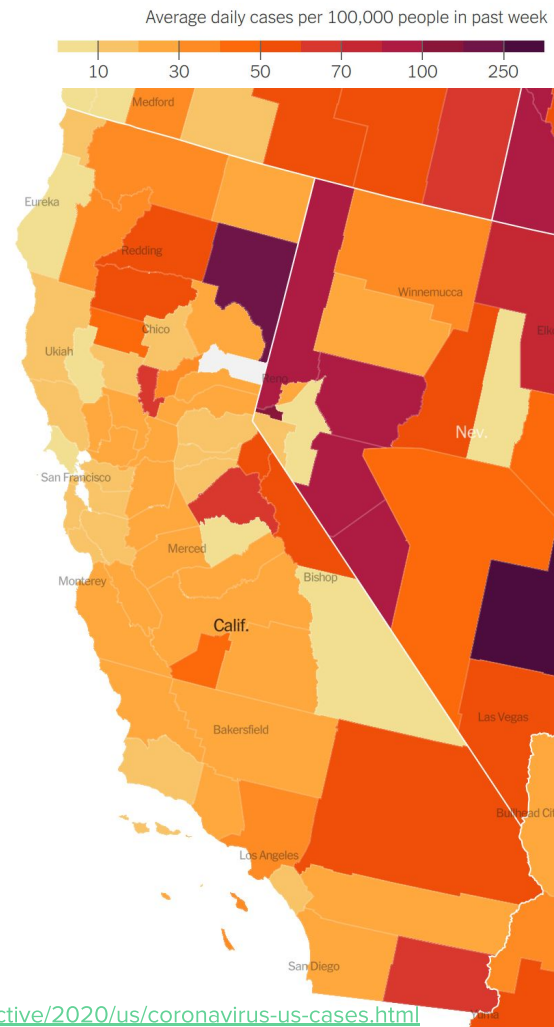

Your Goal: Forecast case and death counts in diverse counties in both north and south of California to help inform the distribution of PPE.

Two sets of counties to forecast:

- The Bay Area (9 counties)
- Choose one of:
 - Exurban counties around LA
 - Rural southern Central Valley counties

Your main tasks:

- Implement 2 methods from Altieri et al. 2020 as baseline.
- Come up with at least 2 methods of your own.
- Tune an ensemble predictor like CLEP.
- Produce prediction intervals.

Breakout rooms to meet with your
final lab teammates.
